Macro 化简二维数组 Mars命令行输入 P2课下提交 P2 课上

Macro 化简二维数组

```
.macro calc_addr(%dst, %row, %column, %rank)
    # dst: the register to save the calculated address
    # row: the row that element is in
    # column: the column that element is in
    # rank: the number of lines(rows) in the matrix
    multu %row, %rank
    mflo %dst
    addu %dst, %dst, %column
    sll %dst, %dst, 2
.end macro
```

Mars命令行输入

java -jar [name of the mars].jar nc [name of the program].asm < [输入数据的文件名].in 1> a.out 2>err.txt

P2课下提交

P2(MIPS练习)

Solution & Advices

<u>Aa</u> Name	Created	Status	≔ Tags
♀ 01迷宫	@October 30, 2021 8:51 PM	Done	2-D MIPS Recursion
<u>🎃 阶乘</u>	@October 30, 2021 8:51 PM	Done	High-Precision MIPS String

P2 课上

每题都给了对应的C代码(其中前两题是全部的代码,最后一个双关键字排序是给了冒泡排序的模板),具体没啥,好好翻译就完了。

注意多重循环的翻译,不要弄混淆了

以及递归的实现,熟练就好
